Primary Examiner, Art Unit 1793

The following is an examiner's statement of reasons for allowance:

The claimed invention is allowable over the prior art of record because said art fails to teach or suggest a non woven abrasive article and method of making it, wherein the article has the structure depicted by the instant claims. The prior art of record fails to appreciate the claimed abrasive article, wherein the article comprises a substrate commensurate in scope with the claimed substrate and an abrasive coating thereon, wherein the abrasive coating comprises a binder (hardened as in claims 1-3, 7-21 and 25-36) and is present on either (1) the peaks/valleys of the substrate, (2) only on the peaks of the substrate or (3) only in the valleys of the substrate. The rejections based on Bergen et al. are withdrawn because it is clear from this reference that the binder is not hardened (i.e. tacky) nor is the abrasive present (1) only on the peaks of the substrate (as is depicted by instant new claim 37) or (2) only in the valleys of the substrate (as is depicted by instant new claim 38). The rejections based on Smith are withdrawn because this reference fails to appreciate the limitation that the thickness of the first and second surfaces vary by no more than 30% throughout the substrate. This reference, in fact, refers to a substrate that has compacted regions and uncompacted regions. Although a reference is not limited to the disclosure in the drawings, it is apparent that the thickness variation between the compacted regions and uncompacted regions of the substrate will vary by much more than 30% (one skilled in the art would have appreciated that such variation between the two regions, for the reference as a whole, being much higher than 30%).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
